

Contract development

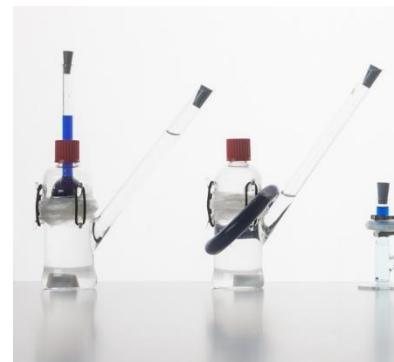

tesa Labtec – your CDMO

Highly specialized from start on dermal and transdermal patches as well as oral thin films, tesa Labtec has more than 30 years of experience in developing those dosage forms.

Our comprehensive experience and know-how generated in numerous development projects is at your disposal.

Whether you have just a hunch to look into different dosage forms, a special idea in mind, like a certain API or the need for an improvement of an already existing formulation.

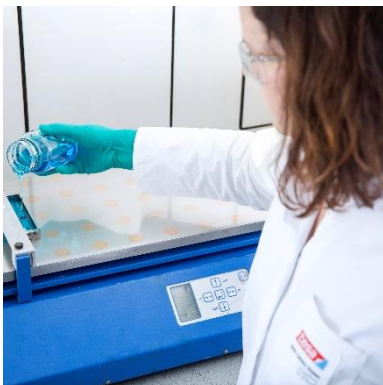

A dedicated team of specialists will evaluate your request, advise you with state-of-the-art knowledge and provide you with a sophisticated project outline and calculated budgets necessary to bring your project to life.

Our specialists for your development

The development site is equipped with the latest technologies to develop and analyze patches and oral thin films.

Whether it is a question of product composition and design, small scale manufacturing, pilot scale manufacturing or the analytical testing, we can offer highly skilled and experienced specialists to develop products compliant to all current European and US guidelines.

Lab scale

Well established feasibility testing capabilities

Prototype and formulation development with robust analytical methods for the assessment of penetration and permeability.

30 years formulation expertise in patch and oral film project available for your contract development.

Pilot scale

Lab factory, pilot production facility for manufacturing of clinical trial supplies

Process development and pilot scale manufacturing for process safety prior to scale up.

Perfect equipment, flexibility and know how available for your contract development.

Commercial scale

State of the art commercial manufacturing equipment

With flexible batch sizes for finished product manufacturing including secondary packaging.

Reliable, flexible and transparent contract manufacturing services.
