## Company insight

# The one-stop shop for peptides

**GL Biochem** is a leading large-scale manufacturer of protective amino acids, peptides and antibody products. With headquarters in Shanghai, the company provides high-quality peptide products to customers around the world from its five production bases and two R&D centres.

GL Biochem invests 15% of its annual revenue into research and development.

**H**aving served the peptide and building blocks industry for more than two decades, GL Biochem is one of China's earliest pioneers in this industry. Rapid global expansion enabled the company to become the world's largest R&D custom peptide producer, with a market share of over 60%. GL Biochem's commitment of 15% of its annual revenue into R&D ensures the steady growth and diversification of product lines, so it can advance its goal of becoming a one-stop shop for clients in this industry.

### The push for peptide vaccines

The pandemic has resulted in severe global social and economic disruption. All the facts show that vaccines are the best solution. Over 200 vaccines have been developed worldwide; peptide vaccines are potentially one of the safest and effective options at the moment.

GL Biochem is in a very strong position to support scientists working both in research organisations and commercial industries to develop peptide vaccines. With over 50% of its staff directly involved in peptide synthesis, one strength GL Biochem is particularly known for its rapid turnaround time – which can be as short as one week – and its large-scale capacity, which enables it to produce more than 10,000 peptides per month.

As a leading manufacturer of peptide reagents and building blocks with the most comprehensive product lines in China, GL Biochem is able to support global pharmaceutical and biotech companies in a highly efficient and cost-effective way, from peptide vaccine screening to peptide kilo production. ●
